

Is your phone system vulnerable to toll fraud?

Your business could be a potential target of PABX Hacking or Toll Fraud. Unless you have taken steps to secure your system, hackers may be able to gain access to your phone system and make calls to Local, National and International numbers.

Access is often gained through voice mailboxes with weak passwords. Once inside your system hackers can use system commands to make calls that could result in phone charges amounting to thousands of dollars.

Access is sometimes gained via factory default passwords that were not changed when the phone system was installed. You should confirm with your maintainer that your phone system's security features have been enabled to provide maximum protection, as you are liable for charges for all calls made through your phone system.

Should you wish to know more about the risks associated with PABX hacking, please call your phone system maintainer or our Customer Service team on 132 777.
